Use-Case Specification: Change Settings

1.   Use-Case Name

1.1   Brief Description

In "Change Settings" you could change your password or your display name.

1.2   Mockup

2. Flow of Events

2.1 Basic Flow

For the user it is possible to change his password and also his display name. When he does not fill out the fields when he clicked on one opportunity he always can back to the settings.

2.1.1   Narration

```
Feature: Change Settings
 As a logged in user
 I want to change my settings

 Background:
   Given a user with the display name "Henry"
   And the password "password123"

 Scenario: change password works fine
   Given I started the app
   And I am logged in as "Henry"
   When I click the button "Einstellungen"
   And I click the button "Passwort ändern"
   And I fill in "password123" in the field "Altes Passwort"
   And I fill in "1234" in the field "Neues Passwort"
   And I fill in "1234" in the field "Neues Passwort wiederholen"
   And I click "Speichern"
   Then the password will be changed in the database

 Scenario: change password with invalid old password
   Given I started the app
   And I am logged in as "Henry"
   When I click the button "Einstellungen"
   And I click the button "Passwort ändern"
   And I fill in "password" in the field "Altes Passwort"
   And I fill in "1234" in the field "Neues Passwort"
   And I fill in "1234" in the field "Neues Passwort wiederholen"
   And I click "Speichern"
   Then the password will not be changed in the database
   And I will see the page "Passwort ändern"
   And I will see an error message "Eingabe ungültig!"

 Scenario: change password with invalid new password
   Given I started the app
   And I am logged in as "Henry"
   When I click the button "Einstellungen"
   And I click the button "Passwort ändern"
   And I fill in "password123" in the field "Altes Passwort"
   And I fill in "1234" in the field "Neues Passwort"
   And I fill in "5678" in the field "Neues Passwort wiederholen"
   And I click "Speichern"
   Then the password will not be changed in the database
   And I will see the page "Passwort ändern"
   And I will see an error message "Eingabe ungültig!"
```

```
